DETAILED ACTION

1. This Office Action is responsive to the filing of the RCE application, with the two attached IDS forms.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-28 and 35-45 are rejected under 35 U.S.C. 102(e) as being anticipated by Gallatin et al., US Patent Number 6,259,513.

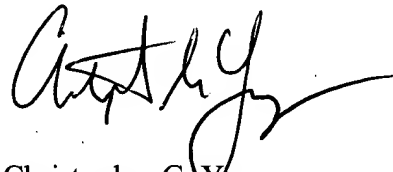

The prior art reference describes, teaches and suggests the essential requirements of the instant invention as claimed. A method for controlling an intensity distribution of radiation for exposure of a photosensitive substrate is shown. An array optical element is used to change the illumination regions prior to passing the radiation through a reticle. See the Abstract. The method is clearly shown in a review of Figures 1-3, described in the specification at column 2, line 37 through column 3, line 47.
